# TEMS. IGNITE

**IEEE TEMS** · INDUSTRY-GRADE NETWORKED INNOVATION & TECHNOLOGY EXPERIENCE · A 61-DAY MENTOR-LED PROJECT CYCLE IN WHICH STUDENTS MOVE A REAL PROJECT THROUGH THE SAME LIFECYCLE THAT SHIPS PRODUCTS IN INDUSTRY. IDEATION. VALIDATION. SPRINT. PROTOTYPE. HAND-OFF.

## 01

## THE ARCHITECTURE

HOW A 61-DAY CYCLE MOVES A  
STUDENT PROJECT THROUGH INDUSTRY

A student project, taken seriously, is a *product*. Over 61 days, **TEMS.IGNITE** moves every team through the four phases a working engineering organisation actually runs — the only difference is that here, the mentor reviewing the sprint has shipped something you've used.

R1-R3 · MENTOR REVIEW CEREMONIES

IGNITION PATH · FINAL SHOWCASE

## // TOOLING

Corporate-grade.  
Git, GitHub, Docker, IEEE DataPort, and open-source platforms students will meet again in their first job.

## // CADENCE

Biweekly sprints.  
Stand-ups, retros, backlog grooming.  
Three formal mentor reviews. Light-touch office hours in between.

## // OUTPUT

A shipped project.  
A documented repository, a working prototype, and a showcase presentation reviewed by practitioners.

## // CERTIFICATE

Jointly signed.  
By IEEE TEMS REVA University Student Branch and the IEEE TEMS Bengaluru Section.

CORE · PROCESS

SECTION 02 · SPECIFICATIONS

*What you take with you when the 61 days are done.*

Every participant leaves with a documented, reviewed project, a working vocabulary in the tooling that matters, and a mentor network that does not disappear when the cohort ends. The specifications below are the deliverables, not the aspirations.

|                  |                                                                                                                |

## // WHO SHOULD ENROL

- 01 B.Tech & M.Tech students — any semester, any year of study.
- 02 Teams on a mini project, major project, or a self-initiated build.
- 03 Hackathon groups ready to take an idea further than 48 hours allows.
- 04 Students aiming to upskill, sharpen their resume, and get placement-ready.
- 05 Anyone curious about how real engineering teams actually ship.

## // WHAT YOU WALK AWAY WITH

- A A shipped project — repository, documentation, and a working prototype.
- B A mentor network — working engineers, senior leaders, and CXOs.
- C A jointly-signed certificate — IEEE TEMS REVA & Bengaluru Section.
- D An evaluation summary — skills demonstrated, rubric-based, verifiable.
- E A cohort — peers, alumni, and networking that outlasts the 61 days.

*This is where the manual stops describing, and the work begins. Fees are tiered to reward IEEE membership and kept deliberately accessible so that cost is never the reason a serious student stays out.*

/ COHORT 01 KICKOFF

July<sup>2026</sup>

61 days of structured execution. Workshops, tech talks, industry visits, mentor reviews, and a final Demo Day show case.

*Most student projects end at the demo. Yours will move through a real product cycle — ideated, validated, built, reviewed, and shipped — under the same discipline that ships software and hardware in industry today. **That is the whole idea.***

## // PROGRAM HOST

IEEE TEMS REVA University Student Branch  
In association with IEEE TEMS Bengaluru Section
